

Faculty of Science

Course: CSCI 2020u – Software System Development & Integration

Component: Assignment

Weight: 10%

Deadline: March 5, 2020 (due by 11:59pm)

Collaboration Policy

You are permitted to work on this assignment in a team, and submit the results as a team. For this sort of assignment, with an open-ended component, the collaboration between multiple team members can be beneficial. Between groups, however, please limit the discussion to the level of general strategy (not code). Groups of size 2 are recommended. Larger groups will be considered with the proviso that the marker will mark your assignment with higher expectations. In any case, be sure that all members of the team fully understand all code, otherwise they will miss intended learning objectives, which may be a considerable disadvantage at exam time.

How to Submit

You will maintain a **git repository** for this assignment, which is a public repository. To submit the assignment, create a single file 'README.txt' that contains instructions on how to download, compile, and run your codes for each question. A .zip, .7z, or .rar file will not be acceptable. **Also submit this word file (once you complete) into related drop box on Blackboard before deadline.**

Note: *Comments are mandatory. Failure to properly document your program will result in a deduction on the marks you receive for this (and any other) assignment.*

Remember:

You need to complete this file and submit it in related **drop box on Blackboard**, in addition to uploading your codes in your **git repository**, before deadline.

Question 1: Displaying Three Cards

Problem Description:

Display a frame that contains three labels. Each label displays a card, as shown in the figure below. The card image files are named 1.png, 2.png, ..., 54.png and stored in the image/card directory. All three cards are distinct and selected randomly.

The image icons can be found in the attached card folder.

Your Task:

1. Create three `ImageView` and set their icons using the images.
2. Display three images from 54 image cards randomly.

Your Code:

Copy-paste your code here:

Question 2: Investment-Value calculator

Problem Description:

Write a program that calculates the future value of an investment at a given interest rate for a specified number of years. The formula for the calculation is as follows:

$$\text{futureValue} = \text{investmentAmount} * (1 + \text{monthlyInterestRate})^{\text{years} * 12}$$

Investment Amount	10000
Years	3
Annual Interest Rate	3.25
Future value	11022.66

Calculate

Your Task:

Use text fields for interest rate, investment amount, and years. Display the future amount in a text field when the user clicks the Calculate button, as shown in the figure.

Your Code:

Copy-paste your code here.

Screen shots:

Question 3: Dragging Points on a Circle

Problem Description:

Draw a circle with three random points on the circle. Connect the points to form a triangle. Display the angles in the triangle. Use the mouse to drag a point along the perimeter of the circle. As you drag it, the triangle and angles are redisplayed dynamically.

Here is the formula to compute angles:

$$\begin{aligned} A &= \arccos((a * a - b * b - c * c) / (-2 * b * c)) \\ B &= \arccos((b * b - a * a - c * c) / (-2 * a * c)) \\ C &= \arccos((c * c - b * b - a * a) / (-2 * a * b)) \end{aligned}$$

Your Code:

Copy-paste your code here:

Include two screen shots here:

Question 4: Histogram

Problem Description:

Develop a program that displays a histogram to show the occurrences of each letter in a text area. The histogram should show the occurrences of each letter in a text file, as shown in the following figure. Assume that the letters are not case sensitive.

Your Task:

- Place a pane that will display the histogram in the center of the frame.
- Place a label and a text field in a panel, and put the panel in the south side of the frame. The text file will be entered from this text field.
- Pressing the Enter key on the text field causes the program to count the occurrences of each letter and display the count in a histogram.

Your Code:

Copy-paste your code here:
